

Lesson 1:

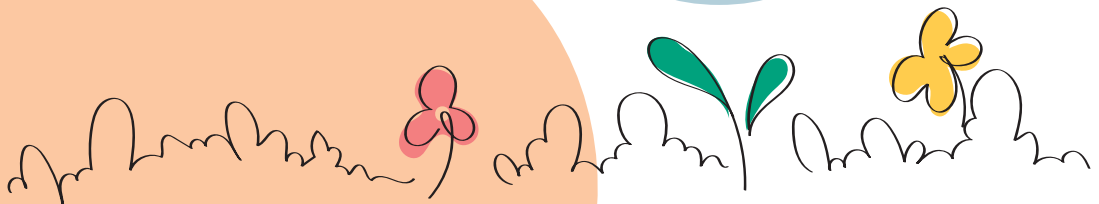

Student Guide

Stories and Scratch

Welcome to Scratch!
It's a place for you to
play, create and bring
your imagination to life.

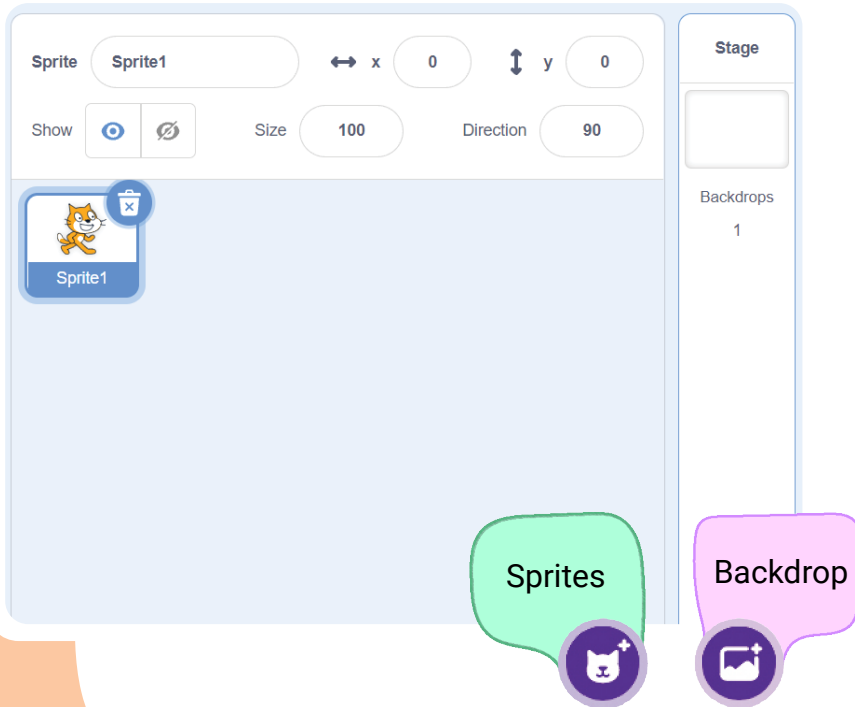

**In this lesson we'll listen
to a story, explore Scratch
and create thing**

Exploring Scratch

In this lesson we'll play with two basic features of Scratch: sprites and backdrop. Click on the icons to explore them.

Sprites

Images of people, animals, and objects that you can control and move using Scratch

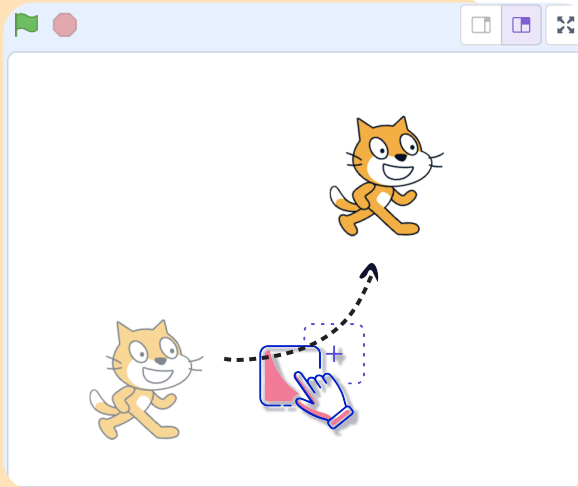

Backdrop

Image of a scene or a place that serves as a background for sprites

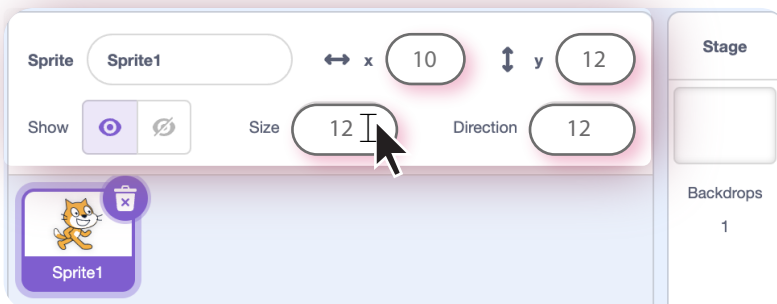

Let's create some stories

Get sprites and backdrops to create a scene from the story you heard from your teacher.

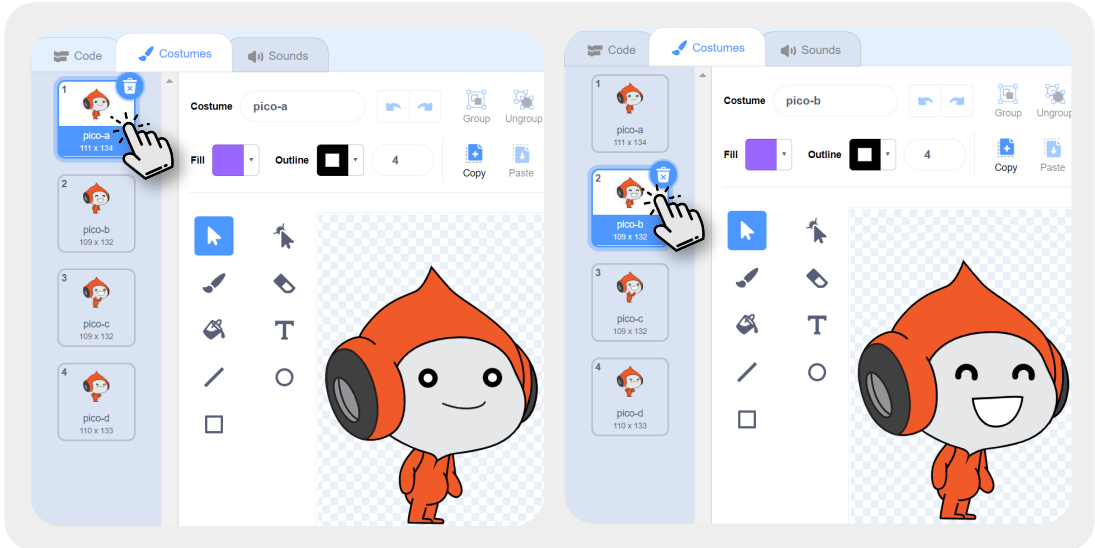

- 1 Drag a sprite to change its position on the stage

- 2 Play with these tools to change size, or to rotate sprite

- 3 Some sprites have more than one image of themselves under the costume tab. Select the image that seems most appropriate to the scene.

Did you finish making your scene?

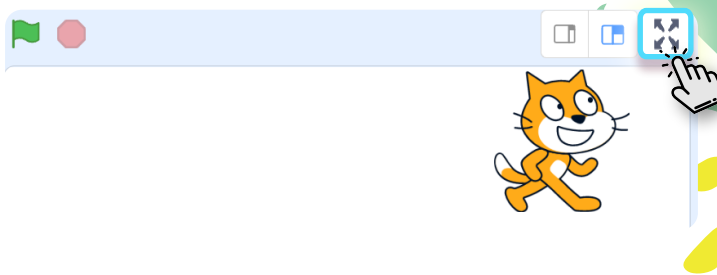

Show your scenes to your friends and look at what they have created.

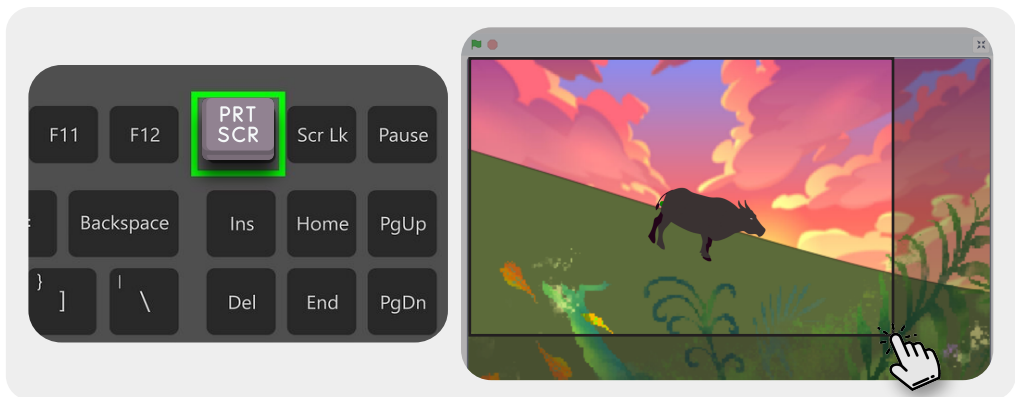

There is so much more that we can do with Scratch. We'll learn about them in the upcoming lessons.

Take pictures of your scenes

1 First, let's get the image to fill the screen.

2 Capture each scene with screenshots, one-by-one and save it to tell story

More things to explore

- 1 Think of a story you really like and create scenes from it 🏔️ 🚀 🌈 🦄
- 2 Add multiple backdrops, create more than one scene from a story you heard, and narrate a story for your friends.

Today we explored

Sprites : images of people, animals or objects that can be controlled using blocks in Scratch

Backdrop : image of a scene or place that works as background

Let's reflect

- 1 What did you find exciting in today's lesson?
- 2 Tell us about something you learnt in the lesson that you didn't know before
- 3 What questions do you now have? It can be out of curiosity or confusion.

After you reflect on these questions, talk to your friends and share your thoughts.
